

AGB Portable EDM

Accessories:

Rev 4

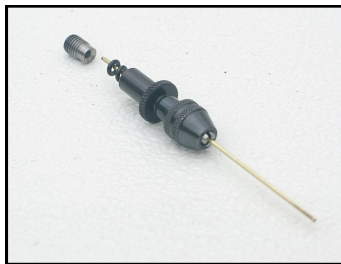

Magnetic Base w/ Ground integrity cable.

The magnetic base is useful when the standard fork base is not easily clamped to the work. The jumper cable insures that a good electrical connection is made between the column and the work.

Machine Registration Stop. New Item!

The registration stop is used to allow the operator to remove and replace the portable EDM machine tool from the column to allow access to the work area and then replace the machine to exactly where it was when removed and then continue with the cutting process.

Tubing Chuck

The micro tubing chuck is used to hold small diameter (.020"-.125") metal tubing electrodes. The chuck and shank are hardened. The chuck has an adjustable tubing seal device to keep the pressured dielectric flowing through the electrodes' bore. Brass, copper, tungsten edm tubing is readily available at edm consumable supply companies everywhere.
